

 Sentimag®

**Localisation and staging,
together in one platform**

THE SENTIMAG® PLATFORM

Patient-friendly breast surgery, made easy

Simple and intuitive to use, Sentimag® enables wire-free and radiation-free breast cancer localisation. It's been designed to keep physicians focused on the procedure — not on the tools.

PRECISION

Surgical guidance you can trust

Sentimag's large visuals and audio guidance allow you to work quickly with great precision. Real-time feedback lets you easily find the exact location of the seed.

MULTI-USE

Localise tumours and nodes in one platform

When you use Sentimag® with our Magseed® marker and Magtrace® lymphatic tracer, there's no need to change sensing device. Transition from tumour and node localisation to staging procedures, all on the same platform.

✦ Magseed®

Pair with the world's most used non-radioactive seed

The Magseed® marker is a tried and tested alternative to wire localisation, and can be placed any time ahead of surgery. So far, it's been used in over 150,000 patient procedures worldwide to simplify breast cancer localisation and improve the patient experience.

IMAGE IS TO SCALE. MAGSEED ACTUAL SIZE IS 5MM × 0.9MM.

 Magtrace®

A simple solution for breast cancer staging

With the Magtrace® lymphatic tracer, you no longer need to worry about supply issues or the burden of radioactivity for SLNB. Magtrace® provides a flexible and accurate way to mark sentinel lymph nodes, all with the same multi-use Sentimag® platform.

CONTROL

Easier access, now in your grasp

The Sentimag[®] Probe allows for easier access and greater visibility when detecting the Magseed[®] marker and Magtrace[®] lymphatic tracer. It's an ideal tool for oncoplastic surgery.

GLOBAL LEADER

Trusted by physicians, globally

The Sentimag® system is simple to adopt, reliable, and effective. Each week, thousands of physicians across the world trust our products to help deliver a better standard of cancer care to their patients.

PROVEN

The data speaks for itself

Don't just take our word for it, the data says it all. Sentimag® has been more extensively studied, and used in more health systems, than any other non-radioactive localization technology, setting a new standard in breast surgery.

A WEALTH OF CLINICAL LITERATURE

16,000+ patients

Involved in clinical studies from all around the world, helping to demonstrate efficacy

9,000+ patients

In Magseed® clinical studies, more than any other seed

7,000+ patients

Featured in Magtrace® published clinical studies

900+ patients

Featured in published TAD studies with Magseed®

DRIVING GLOBAL ADOPTION

250,000+ patients

Treated with the Sentimag® platform

850+ hospitals

Routinely using the Sentimag® platform

45+ countries

A truly global platform, in use on six continents

CREATED WITH PURPOSE

Engineered for physicians, designed for patients

At Endomag we believe everyone deserves the best standard of cancer care. Our mission is to help prevent unnecessary surgery whenever possible, to improve surgery when it is needed and to make treatments accessible to all.

Improving breast cancer
treatment for everyone
